

FIRE PREVENTION

The best way to prevent fire is to minimize its potential through the observation of safe work practices and house-keeping.

You should observe the following basic rules:

- Keep chemical storage areas neat and clean.**
- Always plan laboratory work before executing it. Providing for safety and avoiding potential accidents are important elements of the plan. **You should understand the hazards associated with the chemicals involved before you start the experiment.**
- Know where to find and how to use all emergency equipment** (such as fire extinguishers, eye washes, and safety showers) in the laboratory.
- Keep hood sash closed or as low as possible** to save energy (VAV hoods) and maximize safety to laboratory personnel.
- Do not store large quantities of flammable, combustible or flammable gases outside a flammable liquid or gas cabinet.
- Maintain electrical equipment in good working order.** Periodically check for potential electrical hazards such as frayed cords, broken plugs and overloaded electrical outlets. **Avoid using extension cords.**
- Do not block or hamper passageways or exit doors. **NO storage in exit corridors or stairways.**
- Do not store** combustible items such as paper and cardboard against electrical panels, in telephone closets, stairwells, and corridors.
- Avoid accumulating excessive paper products and corrugated materials.
