LAB GLOVE POLICY
(Wearing Gloves in Common Areas)

Gloves should never touch door handles, elevator buttons, telephones, card swipes, or any surfaces outside of the laboratory.

**ONE GLOVE RULE**

If you transport materials from labs through common areas, use an ungloved hand to touch common surfaces and a gloved hand to carry the items.

*Best lab safety practice is to package the material to allow handling the outer package without gloves and to contain the material if it were dropped.*

Wearing gloves outside of the laboratory is not advised. When transporting chemicals, use carts, bottle carriers or secondary containment trays.
